

The Greenhouse Gas Protocol

Scope 3 Accounting and Reporting Standard

Comment Template

We are providing this template to streamline public comment submissions. To use this template, please follow the instructions below:

- This Scope 3 draft is open for stakeholder comment from November 11, 2009 through December 21, 2009.
- To provide written comments, please use the comment template provided, instead of sending comments in a separate file or e-mail, in order to streamline the comment process.
- When using the comment template, please organize comments by chapter/section and reference page numbers and line numbers.
- If you have questions during the public comment process, please email Holly Lahd at hlahd@wri.org.
- Submit comments as an attached MS Word file by email to Holly Lahd at hlahd@wri.org no later than Monday, December 21st, 2009. We appreciate any effort to submit written comments before the deadline.

S.1 Prioritizing Relevant Emissions Relevant Emissions Relevant Emissions * Requiring companies to measure and report on 80% of their total Scope 3 emissions may prove challenging for companies. It may be cost-effective to measure a smaller percentage, but one that still represents the largest bulk of emissions that companies can influence directly. For now, we pupor the proposed goal of including 80% in an effort to ensure completeness and transparency, however should the pilots demonstrate that 80% is overreaching and not cost effective, we would recommend scaling back the percentage and using a tiered approach, where conformance to the standard is based on a certain percentage and meeting optional criteria denotes higher levels of achievement. Once the pilots yield lessons learned, it will also be important to develop sector-specific rules that can help guide companies in selecting relevant emissions. When including the use phase for energy-using products, guidance should be provided where possible on use-phase assumptions for given products, so that products can be measured against the same use-phase assumptions. 5.3 Prioritizing Relevant Emissions Based on Other Criteria 6. Requiring companies to measure and report on 80% of their total Scope 3 emissions may prove challenging for companies. It may be cost-effective to measure a smaller percentage, but one that still represents the largest bulk of emissions that companies can influence directly. For now, we support the proposed goal of including 80% in an effort to ensure completeness and transparency, however should the pilots demonstrate that 80% is overreaching and not cost effective, we would recommend scaling back the percentage and using a tiered approach, where conformance to the standard is based on a certain percentage and meeting optional criteria denotes higher levels of achievement. Once the pilots yield lessons learned, it will also be important to develop sector-specific rules that can help guide companies in selecting relevant emissions. When including the use phase for energy-using products, guidance should be provided where possible on use-phase assumptions for given products, so that products can be measured against the same use-phase assumptions. 5.3 Prioritizing Relevant Emissions Based on Other Criteria 6.
